Projects

GREENBOOK | Modern Frontend Bookstore
Full-Stack application with production-style architecture and complex state management.

- Architected state management using Redux Toolkit with localStorage persistence.
- Integrated Google Books API via Axios for real-time data fetching and filtering.
- Implemented robust schema-based validation using React Hook Form and Zod.
- Built responsive UI with Material UI and custom notifications.
- Achieved high code reliability through unit testing with Vitest.

Face Massage
Front-end application for service presentation and appointment reservation.

- Tech-stack: HTML, CSS, Bootstrap, JavaScript, i18next.
- Implemented multi-language support (i18next) and responsive design.
