### Summary

My name is Sergii Babanekov. Originally from Ukraine, I am currently based in Sofia, Bulgaria.

Before transitioning into software engineering, I spent 7 years as a Maritime Third Officer, managing navigation systems and communicating daily in international crews.

I recently completed a Full-Stack JavaScript Development course at Hillel IT School, gaining hands-on experience with HTML, CSS, JavaScript, React JS, and Node.js, MongoDB.

On the technical side, I build across both major ecosystems. I started by engineering a production-style bookstore application, GREENBOOK, with React 19, TypeScript, Redux Toolkit. Currently, as an Intern Software Engineer at USENSE, I am building an end-to-end platform using Angular, NestJS, TypeORM, and PostgreSQL, while expanding into AWS cloud infrastructure and core data structures.

I combine strict discipline and data-driven thinking with modern development practices, and I am ready to bring immediate value to a production engineering team.

### Skills

#### LANGUAGE:

- English (C1)
- Russian (Native)
- Ukrainian (Native)
- Bulgarian (B2)

**PERSONAL QUALITIES:** Punctuality, stress resistance, fast learner, teamwork, analytical thinking.

#### TECHNICAL:

- Frontend: HTML5 (Semantic), CSS3 (SASS/LESS, Flexbox, Grid), JavaScript (ES6+), React (Hooks, Context API/Redux), Angular (Building Blocks, Guards, Interceptors, CVA, Drag and Drop).
- Backend: Node.js, TypeScript, Express.js, NestJS.
- Databases: MongoDB (Mongoose), Firebase.
- Tools & Version Control: Git, GitHub, VS Code, Cursor, Google Antigravity, Chrome DevTools, NPM/Yarn, Docker, Webpack, Vite, Vitest.

## Work experience

- 1) Goldenport Shipsmanagement LTD. (2017 – 2021) Cadet, Ordinary Seaman
- 2) Danica Crewing Services (2021 – 2022) Ordinary Seaman
- 3) Nordic Hamburg (2022) Ordinary Seaman
- 4) Seacon Shipsmanagement 2023 – 2024 Able Seaman, Third Officer
- 5) Olive Shipmanagement (2024 - 2025) Third Officer
- 6) Decathlon Poduyane (2025) Sales consultant
- 7) USENSE (2026 – Now) Full-Stack Engineer Intern

## Education

**Master / Bachelor of Navigation** | 2014 – 2019 National University "Odesa Maritime Academy"

**Full-Stack Development Course** | 2024 – 2025 Hillel IT School

## Last Projects

**Freelance CRM & Project Management System | Full-Stack Project** | <https://freelance-crm-six.vercel.app/>

**Tech Stack:** Angular (v19+, Signals, CDK), NestJS 11, PostgreSQL, TypeORM, Docker, TypeScript

- Built an end-to-end B2B CRM and project tracking platform featuring executive analytics, client lifecycle management, and a dual-view task board.
- Engineered an interactive, real-time Kanban desk utilizing **Angular CDK Drag & Drop** and **Signals** for fine-grained, zone-less-ready reactive state management.
- Implemented secure **RBAC authentication** (Admin, Manager, Developer, Client) using JWT, custom NestJS guards, and Angular functional route guards.
- Designed a relational database schema in **PostgreSQL** with TypeORM migrations, relations, and cascade operations.
- Containerized local services via **Docker Compose** and configured automated **GitHub Actions** CI/CD pipelines deploying to Vercel and Render.

**GREENBOOK | Modern Frontend Bookstore** | <https://greenbook-delta.vercel.app/>

- **Role:** Full-Stack Developer (Focus on Frontend & State Management).
- **Tech Stack:** React 19, TypeScript, Vite, Redux Toolkit, Material UI, Axios, Zod, Vitest.
- **Key Features & Achievements:**
  - **State Management:** Redux Toolkit-based architecture, including asynchronous requests via createAsyncThunk and automatic cart synchronization with localStorage.
  - **API Integration:** Integration with the Google Books API via Axios for dynamic genre filtering and searching for detailed book information.
  - **Validation & UX:** Implemented complex checkout form validation using React Hook Form and Zod (schema validation).
  - **Component Library:** Created a responsive interface using Material UI, ensuring UI consistency and built-in notifications (Snackbar/Alert) for user actions.

- **Quality Assurance:** Wrote unit tests using Vitest to validate the application's business logic and utilities.

**Face Message** | <https://graydisel.github.io/face-message/index.html>

- **Description:** Front-end application for presenting services and possibility to reserve the time.
- **Tech-stack:** HTML, CSS, Bootstrap, JavaScript, i18next.
